IIMAK da Amazonia Opens New Facility

(Amherst, NY –) IIMAK, a leading international manufacturer of thermal transfer ribbons, has announced expansion of its Brazil facility, located in the busy industrial district of Manaus. The new facility boasts more than twice the space as the former facility.

Capital improvements include the addition of new slitters and other equipment, which increases IIMAK's production capacity in the growing South American marketplace. Added shipping docks also improve efficiency and delivery times.

Marcos Mendes, Managing Director of IIMAK da Amazonia, is pleased with this commitment in the Manaus free trade zone. "This expansion supports our core thermal transfer ribbon business and allows us to diversify into related products and services to better service our customers."

IIMAK, celebrating its 25 anniversary, is a multinational company that develops, manufactures, and markets all types of printing, imaging, and marking consumables including inks, thermal transfer ribbons, specialty papers, cartridges and cassettes. For more information, visit www.iimak.com.
